## Number of Office Visits to Family Physicians

Nearly one in four of all office visits in the United States are made to general and family physicians every year. In 2001, more than 210 million office visits were made to general and family physicians — 76 million more than to any other specialty.

Number of Office Visits By Age to Selected Specialties

## Number of Physicians Who Are Family Physicians

Increasing subspecialization in health care has resulted in a decreasing percentage of physicians devoted to primary care. In 2002, family physicians comprised 12 percent of all patient care physicians in the United States.

## Geographic Spread of Family Physicians

The geographic spread of family physicians across the United States more closely matches the geographic spread of the general population than any other specialty. While 79 percent of the U.S. population is in urban areas, 69.4 percent of family physicians are in urban areas. While 21 percent of the U.S. population is in rural areas, 24.8 percent of family physicians are in rural areas (5.8 percent unknown classification).

As illustrated by the map below, more than a third of all U.S. counties, with a combined population exceeding 40 million Americans, depend on family physicians to avoid designation as primary health profession shortage areas, a federal government label for counties in which the ratio of primary care physicians to county residents falls below a standard of one to 3,500.

## Average Income of Family Physicians

The median individual income (before taxes) of family physicians is \$150,000, according to the Medical Economics Continuing Survey.

### 2002 Median Income of Physicians by Specialty

\* Compensation for unincorporated physicians is earnings after tax-deductible expenses but before income taxes. For physicians in professional corporations, it is the sum of salary, bonuses and retirement/profit sharing made on their behalf. All figures are medians. Data apply to individual office-based MDs and DOs.
